**Recommended Plants** to be enjoyed with Terra Base

- Amphibious Plants
- Terrrestrial Plants

**Steps to enjoy Terra Base**

1. thinly attach some aquatic moss on the Terra Base and firmly wrap with Terra plate.
2. With the ceramic Terra Base, when the water seeps from the main body, evaporation of the Terra Base decreases due to the heat of vaporization, and it is designed to curb the temperature rise. It effectively works for epiphytes that are intolerant to temperature rise in summer.
3. Terra Base is an item that has been developed for growing part where the humidity tends to be high.
4. Anubias should be placed on the bottom part where the humidity tends to be dry, and aquatic plants such as Alloplysis should be placed on the bottom part where the humidity tends to be high.
